Summary

- Full-stack engineer who ships products **end to end**, across both B2C and B2B.
- Focused on the **application layer of AI products** (OCR, speech-to-text, RAG) with an agent-native workflow.
- **Led a developer community** and contributed to open source; enjoys sharing knowledge and improving team workflows.

Work Experience

Software Engineer - ARDGE Inc., 2025.09 - Present

Vue/React/React Native/Python/Tauri/Docker/K8s/Claude Code

- Agent-native engineering: **80%+** of daily output produced with AI agents such as Claude Code under a Harness Engineering workflow; built a Hermes agent with a Microsoft Teams bot, now used daily by 20+ colleagues.
- Redesigned the speech-to-text audio pipeline: uploads are streamed to disk, split at silence points and transcribed in parallel, then merged by timestamp, **eliminating out-of-memory failures** on hour-long recordings.
- Made AI products scriptable: revocable API keys with permission control, a cross-platform CLI and an MCP server, so **scripts and AI agents can drive the product without a browser**.
- Built an **embeddable AI chat assistant** for an on-premise RAG knowledge-base product: visitors ask without logging in, styling stays isolated from the host site, admins customise the look, with mobile layout and connection-failure handling.
- Full-stack delivery: shipped **multiple Web products from zero to launch**, plus React Native and Tauri apps.
- Automated deployment and release: desktop apps get **multi-platform builds, code signing and auto-update** through GitHub Actions, and the company site auto-deploys on Cloudflare with Markdown pages for AI search (GEO).

Frontend Engineer Intern - BORING Design Lab, 2024.07 - 2025.03

React/Next.js/Angular/TypeScript/Tailwind CSS/Firebase/three.js/GenAI

- Built a GenAI-powered personality quiz app that generated questions in real time, classified visitors' personality types and recommended matching financial products, drawing **10,000+ participants in a single day**.
- Built the points redemption interface for Taishin Bank's Richart site (**3.9M+** users), with real-time input validation and error feedback.
- Built the core card-drawing experience of STARLUX Airlines' "Warmth of Taiwan" site in **Three.js (React Three Fiber)**: a 3D card carousel with custom video shaders and choreographed camera and transition animation.

Side Projects / Open Source

OpenCLI (Open Source Contribution)

JavaScript/Node.js

- A 29k+ star open-source tool that turns any website into a CLI (command-line tool) for AI agents to operate.
- Implemented the complete **Pinterest adapter**: search, image and board create/update/delete and download, with input validation and explicit confirmation for destructive operations.
- github.com/jackwener/OpenCLI/pull/2177

NCKU Bike Festival Website

Vue/Tailwind CSS/LINE API

- Integrated LINE Login and notifications to unify event info, lifting LINE account engagement **300%+**.
- github.com/gdsc-ncku/BikeFestival17th-Frontend

Volunteer Experience

Leader and Frontend Developer - GDG on Campus NCKU, 2023.07 - 2024.06

- Founded and led a Google-supported developer community, growing it to **50+** active members.
- Hosted a **300+** attendee demo day and built the event website; presented on stage and ran live Q&A.

Certificate & Awards

- TOEIC - 905 (2025.05)
- Taipei Metro Hackathon - 4th Place (2025.08)
